Current challenges and pain points

Escalating claims expense

Inconsistent or inaccurate claims handling and inflated repair costs cut margins. Paying excess claims strains loss ratios and profitability.

Profitability

Inaccurate claims lead to costly overpayments, while incorrectly denied claims damage dealer relationships and frustrate customers.

Capacity challenges

High claim volumes push teams to their limits, leading to excess claim backlogs and missed SLAs and KPIs.

Time-consuming processes

Manual tasks like reviewing images, cross-referencing PDFs, inspections, or reviewing diagnostic trouble codes slow down processing.

Out-of-line conditions and risk

Out-of-line conditions—like repeated high-cost repairs for a component—often go unnoticed without tools to identify them.

Circuitry.ai solution

AI Advisors empower adjusters with fast, accurate answers through conversational AI. AI Analysts offer actionable insights with advanced analytics, spotting signals and optimizing decisions. AI Agents automate repetitive tasks, allowing your team to focus on higher-value activities.

Claims validation

Instantly cross-check claims against VSC service contract terms, historical data, open recalls, and repair guidelines.

AI-powered recommendations

Get informed recommendations based on claim data and knowledge.

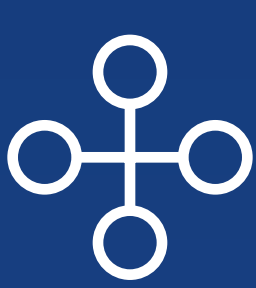

Fraud detection

Detect out-of-line conditions and identify inconsistencies like mismatched parts, fake or reused photos, or suspicious alterations

Scalable efficiency

Handle more claims so you can increase capacity without increasing headcount.

Automated workflows

Eliminate manual steps by automating document reviews, data extraction, claim scoring, image reviews, and more.

Intelligent AI Automation for Service Contract TPAs and OEMs

You understand the complexities of managing service contract claims, and so do we. The Circuitry.ai team combines deep industry knowledge with advanced AI technology to deliver innovative and practical solutions.

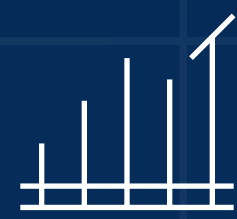

The Benefits For Your Business

Lower costs
Reduce claims costs by 10–20%

Higher accuracy
Achieve 97%+ accuracy in claims decisions.

Increased productivity
Boost team capacity by 35%.

Faster turnaround
Improve claims handling time and “touches” by 45%.

Why Choose Circuitry.ai?

Built for service contract claims
Our AI understands the complexities of automotive, powersport, home, appliance, and heavy equipment claims management.

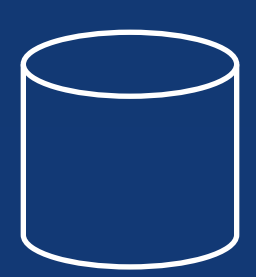

Fast implementation
We get you up and running so you can start improving claims accuracy and efficiency in days and weeks, not months.

Augments existing systems
Our AI works alongside your claim systems and business intelligence tools to drive immediate results.

Easy to use
Our platform allows your adjusters to quickly get the answers they need while simplifying your current processes.

Handles unstructured data
Claims data is often messy. Circuitry.ai simplifies the process by handling all types of data, such as pictures, videos, inspections, PDFs, text, audio, and more.
